

# Hubberts Industries

Brampton, ON

## Project Overview

Hubberts Industries in Brampton installed a new weighing scale and trucks were having a difficult time backing up into the right side of the building to access it. A potential accident was waiting to happen as trucks had to back in at an angle to access the scale in a tight space.

To improve safety, we increased their existing 20' wide opening by 9' for a total of 29'. This larger opening allows for trucks to back up directly onto the scale. We then installed an insulated extra large [steel sectional overhead door](#).

As a result, operation efficiencies have increased and the risk of accidents has decreased as large tanker trucks do not need to back in on an angle in a tight space to get their truck on the scale.

- ✓ Improve safety
- ✓ Workplace productivity
- ✓ Operational efficiency
- ✓ Insulated
- ✓ Indoor comfort
