

The Treadmill Factory

Markham, ON

Project Overview

These mechanical dock levelers had seized and were not working due to inactivity. Instead of having to replace the dock leveler completely, Northern Dock Systems had a cost-efficient solution to convert the mechanical docks to hydraulic.

When converting these mechanical docks to hydraulic dock levelers our technician:

- Cut out and removed all mechanical parts of the dock.
- Changed out the seized shaft with a new lip shaft.
- Installed all the [hydraulic conversion kit's](#) components.

The hydraulic conversion kit adapts to all sizes of dock levelers and keeps repair and replacement costs low. As a result, The Treadmill Factory has minimized downtime in their daily operations by turning their mechanical dock levelers into hydraulic dock levelers with the hydraulic conversion kit.

✓ Improve safety

✓ Operational efficiency

✓ Workplace productivity

✓ Cost efficient

Featured Products

[Hydraulic Conversion Kit](#)

- Heavy-duty cylinders.
- Adaptable to all sizes.
- Full hydraulic operation to automatically extend the lip.
- Simple operation with single push-button control.
- All brackets, hydraulic hoses and pins supplied.
- Dust-tight electric enclosure.
