

LoMaster Stationary Dock Lift (DL) Triovest

Toronto, ON

Old and out-of-service dock lift

Project Overview

Our customer, Triovest in Toronto, needed a new dock lift table for their real estate business. The customer was having issues with costly repairs occurring time and time again. In fact, they noticed once they fixed one issue, another would occur. In addition, they had a hydraulic leak that resulted in a safety concern for their employees and delivery companies. As the challenges kept on coming more frequently, it was harder for them to keep up with them.

Our customer had an unreliable lift table that would not work consistently for their day-to-day operations. For example, the carriers would get stuck bringing products halfway up. Thus, causing them to lose efficiency in time with their work.

By contacting Northern Dock Systems, our project manager was able to install a new and reliable lift table to make the customer's deliveries smooth and efficient. The [Blue Giant LoMaster Stationary Dock Lift \(DL\)](#) was installed with a deck length of 48", and a deck width of 72". It can hold a combined weight of 3,500 pounds. The state-of-the-art robotic welding and rust-resistant powder coat makes their lifts highly dependable. Some of the safety features for dock lift tables include anti-slip powder-coated deck, handrails, a 4" kick plate and a barrier chain across each end.

All in all, Triovest needed a long-lasting solution to help save them time and money. Therefore, new dock lift tables are a great investment and reduced long-term costs. Above all, our customer is extremely satisfied with their solution. They were able to end service calls for constant repairs and have no fear of hydraulic leaks. As a result, it is now a safe environment for their workers.

- ✓ Improve safety
- ✓ Operational efficiency
- ✓ Workplace productivity
- ✓ Heavy-duty

Featured Products

[Stationary Dock Lift](#)

- Completely sealed, weather-resistant cylinders vented back to hydraulic tank to prevent contaminant entry
- Easy to operate with deck-mount push button controls
