

Hydraulic Dock Leveler and Electric Hook Trailer Restraint  
PPG Coatings Services

Cambridge, ON

Project Overview

Six of the positions at PPG Coatings Services’ manufacturing plant in Cambridge were reaching the end of their life cycle. Therefore, they reached out to Northern Dock Systems to supply and install new dock levelers and trailer restraints for these positions.

Our [equipment installation](#) team removed and disposed of the existing dock levelers, “pit hook” style vehicle restraints and control panels. In preparation for the installation, our technicians formed and poured concrete to fill in the “pit hook” void for the new vehicle restraints

Next, our technicians installed:

- (6) 7’ x 8’ custom [Blue Giant hydraulic heavy dock levelers](#)
- (6) Nickel-plated [Blue Giant electric hook trailer restraints \(HVR303\)](#)
- (6) Blue Genius Gold Series III combo control panels with dock and restraint integration

Once installed, our [electrical services](#) team connected and activated all the new equipment.

This Cambridge manufacturing plant can now rest with ease, knowing that its new equipment will last for years to come. While the upgraded electric hook trailer restraint (HVR303) will make their dock even safer. It can hook on various trailers, including those with bent or damaged ICC bars. In addition, it automatically adjusts to the trailer motion during loading and unloading to minimize the risk of separation and injury.

- ✓ Improve safety
- ✓ Easy operation
- ✓ Workplace productivity
- ✓ Long lasting
