

Dock Lift Table Replacement
Downtown Toronto Retail Store Alleyway

Toronto, ON

Project Overview

The dock lift table was at the end of its lifespan and was having issues due to its age. The chain had broken off the ground loading lip making it impossible for staff to lift it into the upright position. Additionally, they were having issues with power to the dock lift table.

They reached out to us for this tricky lift table replacement installation for this narrow downtown Toronto alleyway. We replaced this old lift table with a new Blue Giant Dock Lift. Furthermore, we made some design changes to improve safety and make operating the lift table easier.

First off, we removed the guard rails from the back of the deck. By having guardrails against the building's wall, there was a risk that employees could pinch their fingers between the rail and the wall. Next, we removed the front lip for trailer bed loading. Due to the narrow alleyway, it was impossible for trucks to back up straight to the lift. As a result, all loading was done at ground level. Instead, we made sure that the dock could be lowered to ground level and added a gate on the front side of the deck. By switching out the lip for a gate, we were able to save our customer money on the installation.

“ The Store Manager and employees were very impressed when we commissioned the dock. Great upgrade for them overall and a relief not to have to worry about the dock not working unexpectedly for deliveries/pick ups. Were very happy about the key lock out on the push button as they are downtown Toronto in an alley hidden from most view. ”

- ✓ Improve safety
- ✓ Easy operation
- ✓ Workplace productivity
- ✓ Anti-slip

Featured Products

Stationary Dock Lift

- Completely sealed, weather-resistant cylinders vented back to hydraulic tank to prevent contaminant entry
- Easy to operate with deck-mount push button controls
- Versatile ground-level option when no loading dock is present

EQUIPMENT INSTALLATION
