

**Custom Ramp and Platform
Logistics Warehouse**

Guleph, ON

Project Overview

This logistics warehouse in Guleph was challenged to accommodate the variety of vehicles that would arrive for product pick-ups or delivery. They needed two of their position converted to handle trucks other than just semi-trailer trucks.

Northern Dock Systems developed the solution for a custom ramp and platform. These custom ramps and platforms were designed to accommodate a fleet of light-duty inbound vehicles with a capacity of 30,000 lbs. The goal of the ramp was to match the truck bed and dock height. As a result, it is now easier to load and unload these light-duty vehicles.

In addition, this custom ramp and platform has an adjustable height of 20"-30" off the grade. So, this gives this logistics warehouse the flexibility to adjust the ramp now and in the future as the fleet changes.

This custom ramp and platform features:

- Ramp length 20'
- Platform length 25'
- Total width 120"
- Capacity 30,000 lbs
- 42" safety handrails
- 12" safety rub rails
- Ramp height adjustable 20"-30" off grade
