

**Scissor Lift Table Replacement  
Funeral Home**

Scarborough, ON

**Project Overview**

The old scissor lift table in this funeral home in Scarborough was 40 years old and barely working.

They contacted Northern Dock Systems to remove and replace their old scissor lift table. Due to this being their only lift, our [Equipment Installation](#) and [Electrical Services](#) teams worked hard to remove the old lift table and install the new [Blue Giant Standard Duty Scissor Lift Table](#) in a single day. As a result, disruptions to their operations were minimal.

The Standard Duty Scissor Lift Table is ergonomically designed to improve operator efficiency. With vertical travel from 24" to 60" high and lifting capacities of up to 6,000 lbs., these units can handle loads with ease. In addition, our Scissor Lift Tables have:

- Heavy-duty cylinders for hydraulic models
- Heavy-duty steel legs
- Internal power units
- Lifetime lubricated bushings
- Safety maintenance blocks
- Standard hand controls
- Optional accordion skirt to improve safety while in the raised position

This funeral home is happy to have a new and reliable scissor lift table to keep operations running smoothly for years.
