

Bug Screen Door
Ryder Systems Inc.

Calgary, AB

Project Overview

Ryder Systems Inc. in Calgary was looking to get fresh air into their facility as part of their food safety compliance. They contacted Northern Dock Systems for a solution.

There was an overhead door that was not used, so we determined that putting a [Bug Screen Door](#) on it would be the most effective way to get in fresh air. The bug screen door would open the facility for fresh air and work with the existing HVLS fan to improve air circulation.

In addition, the industrial mesh screen would stop contaminants such as bugs, birds and pests from entering. The customer opted for a black-on-black mesh and barriers for a clean and sleek appearance.

Finally, as a last layer of protection, the roll-up bug screen door was sealed with mesh all around the gap between the door track and the wall.

The customer is happy with their new bug barrier door and the fresh air that it brings into their facility while keeping out bugs to keep them compliant with food safety standards.

Featured Products

[Bug Screen Door](#)
(Bug Barrier)

- Lets in fresh air
- Lets in natural light
- Keeps out bugs, birds, pests and other contaminants
- Food safety compliant
- Clean and sleek appearance

**EQUIPMENT
INSTALLATION**

- ✓ Improve safety
- ✓ Easy operation
- ✓ Fresh air
- ✓ Natural light
- ✓ Stops bugs
