

## Stationary Dock Shelter BakeMark

Richmond, BC

### Project Overview

The stationary truck shelters at three positions at BakeMark were getting worn and needed replacement. This Richmond food manufacturing facility was looking for other alternatives to what was currently installed. Since the current dock shelters were not holding up well.

Northern Dock Systems was able to supply and install three new [Blue Giant Stationary Dock Shelters \(BG400\)](#). Due to our partnership as a Blue Giant Authorized Dealer and Blue Giant's short lead times, we were able to get these new docks installed faster than expected.

These durable Stationary Dock Shelters not only function well but look great too. They are constructed with a thicker 40oz Hi-Tear vinyl, which will last for years to come. Additionally, these dock shelters have stiffeners and a foam-filled edge to create a tight seal around the trailer. As a result, employees have full access to the trailers while being protected from outside weather conditions.

Moreover, the 36" drop head curtain and replaceable bottom foam draft pads create a 360° seal around trailers to stop white light and contaminants from coming into this Richmond food manufacturing facility.

Furthermore, the 24" yellow reflective guide strip makes it easier for backing up trucks to align with the Stationary Dock Shelter. Finally, the steel guard offers additional protection for the loading dock equipment and dock shelter from the backing-up trucks.

- ✓ Tight seal
- ✓ Indoor comfort
- ✓ No white light
- ✓ Energy-savings
- ✓ Pass audits

### Featured Products

[Stationary Dock Shelter \(BG400\)](#)

- 40oz Hi-Tear vinyl
- Stiffeners for constant contact
- Foam-filled edge for complete seal
- 24" yellow guide stripe
