

Versa Light LED Dock Lights for Trailers  
Canadian Hospital Specialties

Burlington, ON

Project Overview

Canadian Hospital Specialties in Burlington lacked proper dock lights at several positions and turned to Northern Dock Systems for our expertise in equipment installation and the superior dock lighting solutions we offer. Our team installed 14 [Versa Lights LED dock lights](#) at positions 13-20 and 30-35.

The Versa Light sets itself apart from other dock lights by providing full illumination for a 53' trailer, unlike competing lights that only partially cover the area due to their narrow focus. This is achieved through the use of bright yet soft LED light that disperses the light widely while being gentle on the eyes. In contrast to harsh and blinding spotlights that other dock lights use. Additionally, the LED light is low voltage, making it energy efficient.

Furthermore, the Versa Light features a 360° flexible tube, allowing it to be easily positioned and flexed to any angle. Other dock lights use a swing style, making it hard to position them in the correct spot. In addition, the flexible tube and housing of the Versa Light are strong enough to withstand accidental impacts from forklifts and doors.

In terms of maintenance, the Versa Light is designed for minimal upkeep. It includes a built-in fan to prevent overheating. Furthermore, the LED light bulbs boast an impressive expected lifespan of 85,000 hours.

- ✓ Improve safety
- ✓ Easy operation
- ✓ Workplace productivity
- ✓ Energy savings

Featured Products

[Versa Light LED Dock Light](#)

- Energy efficient low voltage LED bulb.
- Fully illuminates the backside of a 53' trailer.
- Easily position with flexible tube.
- Withstands impacts.
