

16 Loading Docks and 5 Drive in Doors  
Bucci Construction

Calgary, AB

Project Overview

Our Equipment Construction and Design team collaborated with Bucci Construction to provide and install 21 doors for a new warehouse building in Calgary. This commercial warehouse features 16 loading docks and 5 drive-in door positions.

Our professional Equipment Installation technicians installed:

- (16) 6' x 8' [Blue Giant Hydraulic Levelers \(H6008\)](#) with pour-in-pan and [steel-face dock bumpers](#).
- (16) [Blue Giant Adjustable Head Curtain Dock Seals \(BG200V-40\)](#) to suit 8'6" x 9'6" openings.
- (16) 8'6" x 9'6" [Insulated Sectional Overhead Doors \(C175\)](#) with bumper leaf springs and manual operation for the loading dock positions.
- (5) 12'0" x 14'0" [Insulated Sectional Overhead Doors \(C175\)](#) with bumper leaf springs and manual operation for the drive-in door positions.

Each loading dock position was equipped with a hydraulic dock leveler for easy push-button operation during trailer loading and unloading. These hydraulic dock levelers have fewer moving parts than mechanical dock levelers, requiring less maintenance and reducing the likelihood of breakdowns.

Furthermore, we installed adjustable curtain dock seals around the loading dock positions to create tight seals around trailers. This contributes to energy savings and prevents contaminants from entering during loading and unloading. Lastly, to protect the loading docks from trailer impacts, each position was equipped with steel-face dock bumpers.

- ✓ Workplace productivity
- ✓ Long lasting
- ✓ Improve safety
- ✓ Easy operation
