

Dock Bumpers
Reimer Hardwoods

Abbotsford, BC

Project Overview

The loading dock's worn laminate bumpers were no longer providing adequate protection, risking damage to the dock equipment. Northern Dock Systems replaced them with durable [Steel Face Dock Bumpers](#) to offer better impact absorption and safeguard the facility.

The benefits of steel face dock bumpers:

- **Protection:** Steel face bumpers absorb impacts, preventing damage to the building, dock seals and levelers.
- **Durability:** The steel face resists wear, extending the bumper's lifespan compared to laminate options.
- **Efficiency:** The low-friction floating faceplate allows smooth trailer movement, reducing wear on both bumpers and trailers.
- **Flexibility:** These bumpers can be customized for various applications and mounting configurations, making them versatile for different docks.

The technician set up the work area near the building and removed the old bumpers. Anchor studs were cut off, and new locations for the concrete anchors were marked. Twelve heavy-duty concrete wedge anchors were installed to secure the new bumpers, followed by a fresh coat of black spray paint for added protection.

The new steel face bumpers improve safety, reduce damage and minimize repair costs. Their durability and efficiency ensure the loading dock is ready to handle frequent trailer impacts.

- ✓ Protects building from damage
- ✓ #1 defense
- ✓ High traffic
- ✓ Durability

Featured Products

[Steel Face Dock Bumpers](#)

- Built to withstand frequent impacts.
- Absorbs heavy impacts, protecting dock equipment.
- Floating faceplate allows smooth trailer movement.
- Multiple mounting options for different dock setups.
